DETAILED ACTION

Election/Restrictions

1. Claims 1 and 8 are allowable. The restriction requirement, as set forth in the Office action mailed on 11/28/2008, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 2, 3, 6,7,9,10,13, and 14, directed to non elected embodiments of figures 1,2,3 are no longer withdrawn from further consideration because dependent claims 2, 3, 6,7,9,10,13, and 14 require all the limitations of an allowable generic linking claim as required by 37 CFR 1.141.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

2. Claims 1-3, 6-10, 13 and 14 are allowed over the prior art of record.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: prior art of record do not teach or suggest the following invention: a liquid drop placing apparatus/method comprising: an ink jet head; a substrate receiving a liquid drop; a device for irradiating or reflecting light from a nozzle hole or its vicinity of the ink jet head toward the substrate; a position moving device; a control device; wherein a light-receiving element for recognizing a position of the ink jet head is disposed behind the substrate, when seen from the ink jet head, the substrate has a transparency at least to a degree for the light, and the light-receiving element senses the irradiated/reflected light from the nozzle hole or its vicinity toward the substrate, wherein the ink jet head comprises a system for irradiating light from an inside of the nozzle hole discharging the liquid toward the substrate, and wherein the system for irradiating the light from the inside of the nozzle hole toward the substrate comprises the nozzle hole, a pressure chamber for generating a pressure for discharging the liquid from a nozzle, a flow channel for supplying the liquid to the pressure chamber, a container for storing the liquid and a tube for transporting the liquid from the container to the flow channel, and a surface that the liquid contacts is formed of a light-reflecting material, and light from a light source is brought into the container and guided to the nozzle hole.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
